Preface

Chunming Rong and Martin Gilje Jaatun, University of Stavanger

The aim of the NISK conference series is to be the principal annual research venue in Norway for presenting and discussing developments in the field of ICT security and privacy. We seek to bring together people from universities, industry, and public authorities. We invite both national and international contributions by researchers, practitioners, and PhD- and Master thesis students presenting new problems and solutions within topics on ICT security.

Acceptable topics were sought in all areas of ICT-related information security problems, both theoretical, experimental, and best practice. Three contribution categories were available for NISK 2023, but only full papers where submitted and considered by the technical program committee.

NISK 2023 received 15 contributions, with contact authors primarily from Norway, but also some contributions from Germany and Greece. Based on a review process where all submissions received at least two reviews, and most received three reviews, 10 submissions were accepted for presentations at the conference, and included in the conference proceedings.

Stavanger, November 28th 2023
