*“The study of functions doesn’t represent anymore a solid base for hospitals architectural design. Functions change so often that architects will not have to aspire to the optimum between form and function. The real requirement is designing buildings that would allow functions to change”*

John Weeks

# 7 ENERGY CONSUMPTION

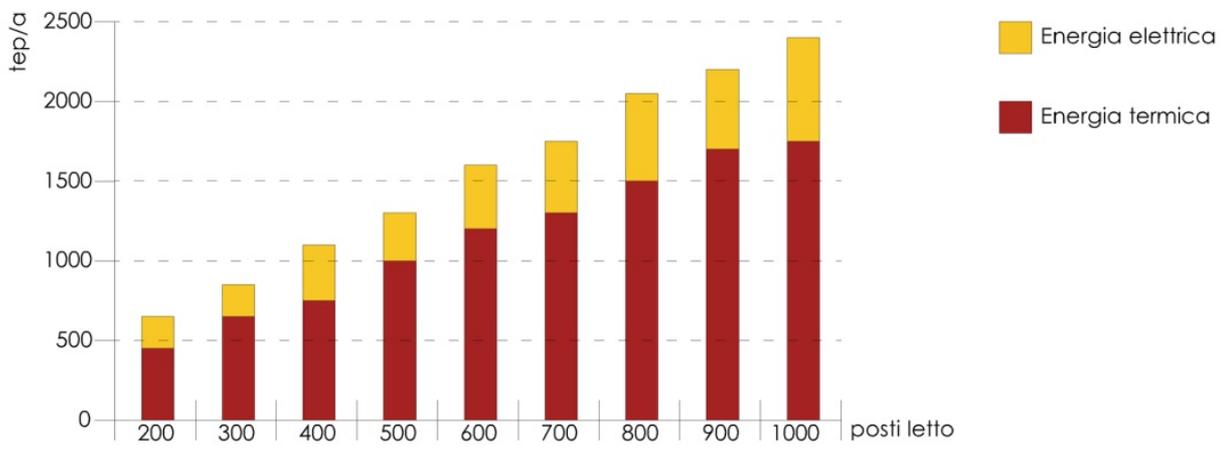

**THERMAL DEMAND**  
ALMOST 70% OF TOTAL CONS.

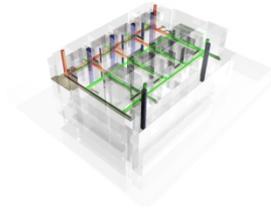

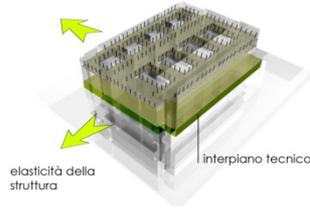

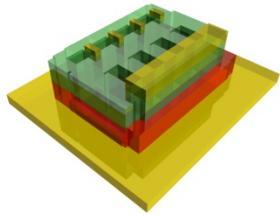

PRINCIPALI INDICATORI DI CONSUMO ENERGETICO ANNUO

Energia termica impiegata per	Consumo tep/p.l.
Riscaldamento	1,40
Usi tecnologici	0,80
Acqua calda	0,15
Lavanderia	0,20
Preparazione alimenti	0,02
Altri usi	0,03
<b>Energia elettrica</b>	<b>0,70</b>
<b>Totale</b>	<b>3,60</b>

Thermal energy used for environmental comfort represents more than two thirds of the total consumption. Font: ENEA, 1996

$$S_w/V_t \text{ (m}^{-1}\text{)}$$

Implications of the shape on the thermal demand are negligible if compared with those ones due to the adoption of a certain low energy strategy

## THERMAL DEMAND

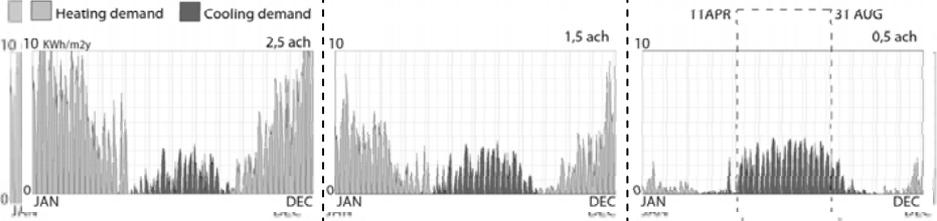

### SPECIFIC CHARACTERISTICS

Unit	Ref.	TEKO 7	LE
U-value external wall	$W/m^2/K$	1.2	0.15
U-value roof	$W/m^2/K$	0.60	0.13
U-value floor on ground	$W/m^2/K$	0.50	0.18
U-value windows, glazed walls and roofs	$W/m^2/K$	2.4	1.2
Air-tightness	ach	3.0	0.6
Heat recovery system efficiency	-	0.7	0.85
Occupancy	$Per./m^2$	0.1	0.1
Cooling set point temperature	$^{\circ}C$	26	26
Heating set back temperature	$^{\circ}C$	18	18
Lighting load	$W/m^2$	8	8
Equipment load	$W/m^2$	11	11

Importance of using strategies for reducing the cooling demand or coping with it.
