Subject Description Form

Subject Code	COMP 2021
Subject Title	Object-oriented Programming
Credit Value	3
Level	2
Pre-requisite/ Co-	Pre-requisite
requisite/ Exclusion	COMP 1011
Objectives	The objectives of this subject are to:
	1. To introduce students the basic elements of object-oriented
	programming
	2. To teach students how to program computer systems using
	an object-oriented programming language
	3. To familiarize students the tools that streamline object-
	oriented development
Intended Learning	Upon completion of the subject, students will be able to:
Outcomes	Professional/academia knowledge and skills
	(a) Use an object oriented programming language to solve
	(a) Use an object-oriented programming language to solve
	(b) Use an object-oriented programming language to build
	computer systems
	Attributes for all-roundedness
	(c) build computer systems in groups and develop group work
	(d) cooperate with team members in problem solving
Subject Synopsis/	1. Object-based programming. Concept of objects and
Indicative Syllabus	classes Correspondence between software objects and
	clusses. Conceptindence between software objects and
	real-world objects. Constructors and destructors.
	real-world objects. Constructors and destructors.2. "Has-a" relationships and encapsulation. Data hiding and
	 real-world objects. Constructors and destructors. 2. "Has-a" relationships and encapsulation. Data hiding and protection.
	 conception of the second software objects and real-world objects. Constructors and destructors. "Has-a" relationships and encapsulation. Data hiding and protection. Object-oriented programming. Concept of class biogenetics. "Is a" relationships and in heritance.
	 consistence between software objects and real-world objects. Constructors and destructors. "Has-a" relationships and encapsulation. Data hiding and protection. Object-oriented programming. Concept of class hierarchies. "Is-a" relationships and inheritance.
	 consistence between software objects and real-world objects. Constructors and destructors. "Has-a" relationships and encapsulation. Data hiding and protection. Object-oriented programming. Concept of class hierarchies. "Is-a" relationships and inheritance. Overriding of methods. Delymorphism. Pup. time binding. Abstract classes and
	 consistence between software objects and real-world objects. Constructors and destructors. "Has-a" relationships and encapsulation. Data hiding and protection. Object-oriented programming. Concept of class hierarchies. "Is-a" relationships and inheritance. Overriding of methods. Polymorphism. Run-time binding. Abstract classes and methods
	 conception between software objects and real-world objects. Constructors and destructors. "Has-a" relationships and encapsulation. Data hiding and protection. Object-oriented programming. Concept of class hierarchies. "Is-a" relationships and inheritance. Overriding of methods. Polymorphism. Run-time binding. Abstract classes and methods. Multiple inheritance and templates in C++ Interfaces in
	 chasses: correspondence between software objects and real-world objects. Constructors and destructors. "Has-a" relationships and encapsulation. Data hiding and protection. Object-oriented programming. Concept of class hierarchies. "Is-a" relationships and inheritance. Overriding of methods. Polymorphism. Run-time binding. Abstract classes and methods. Multiple inheritance and templates in C++. Interfaces in Java.
Teaching/Learning	 conceptual elements in C++. Interfaces in Java. Conceptual elements in C++. Interfaces in Java.
Teaching/Learning Methodology	 chasses: correspondence between software objects and real-world objects. Constructors and destructors. "Has-a" relationships and encapsulation. Data hiding and protection. Object-oriented programming. Concept of class hierarchies. "Is-a" relationships and inheritance. Overriding of methods. Polymorphism. Run-time binding. Abstract classes and methods. Multiple inheritance and templates in C++. Interfaces in Java. This subject emphasizes both the conceptual elements in computer programming and practical experiences. A high-
Teaching/Learning Methodology	 real-world objects. Constructors and destructors. 2. "Has-a" relationships and encapsulation. Data hiding and protection. 3. Object-oriented programming. Concept of class hierarchies. "Is-a" relationships and inheritance. Overriding of methods. 4. Polymorphism. Run-time binding. Abstract classes and methods. 5. Multiple inheritance and templates in C++. Interfaces in Java. This subject emphasizes both the conceptual elements in computer programming and practical experiences. A highlevel, object-oriented programming language. such as C++ or

	The lectures will be used to deliver course material that will be practiced/reinforced during the tutorials/labs. Group projects will be given to give students hand-on development experience.								
Assessment Methods in		Т	1_						
Alignment with	Specific Assessment	%	Intended subject						
Intended Learning	Methods/Tasks	weighting	learning						
Outcomes			outcomes to be						
			assessed						
			a	b	c	d		_	
	Assignments, Tests & Projects	60%	V	~	~	•			
	Final Examination	40%	\checkmark	>					
	Total	100%							
	A pass in both the continuous assessment and final examination portions are required to pass this subject.								
Student study effort	Class Contact:								
expected	Lecture	35 hours							
	Tutorial/Lab					21 hours			
	Other student study effort:								
	Assignments, Quizzes, Projects, Exams 64 hours								
	Total student study effort120 hours
